Beautiful Handwriting Blacklines For Ages 4-7 ~ Students Trace, Copy and Compose A Sequenced, Simple Curriculum For Print, Cursive and D'Nealian Writing!

Beautiful Handwriting was created in the classroom. It has been used for over 15 years. Introduce correct formation when children are drawn to it—usually ages 4 - 4.5 for girls and 4.5 - 5.5 for boys. Have small meetings and work one on one. Model the work. Begin on the dot and whisper it as you trace it. Lines and dots are a road map to success.

“Written language can be acquired more easily by children of four years than by those of six. While children of six usually need at least two years to learn how to write children of four years learn this second language within a few months.”

Dr. Maria Montessori

Blacklines M-1 through M-18, purchase any 6 and get 1 free; purchase any 12 and get 2 free!

Beautiful Handwriting Blacklines For Ages 4-7 ~ Students Trace, Copy and Compose A Sequenced, Simple Curriculum For Print, Cursive and D'Nealian Writing!

Children recognize the alphabet and like writing it in order. It is what they know. Children in their sensitive period for writing like to form letters on paper. Show them by tracing over a line with the correct path. After years of watching children write with different tools we recommend using Crayola markers. They're colorful and glide across the paper. Colored pencils are a good second choice. We recommend Nienhuis triangular colored pencils. When a mistake is made the child covers it with a mistake sticker. We recommend Avery brand small stickers cut into small strips for mistake stickers.

The sting ray is a flat fish.

Who am I?
I am a flat fish. I have no bones. I burrow in the sand.

sting ray
The sting ray is a flat fish with no bones. It burrows in and feeding on crabs, and worms. When it hides in the sand.

Cave Formation Cards ~ Learn About Karst Landscapes

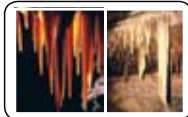

Includes matching of: photo/photo, photo/sentence, photo/definition, photo/who am I cards. For P and E classrooms.

stalactite

Stalactites are dripstones that hang down from a ceiling like an icicle.

What Am I?
I am a dripstone that hangs down from the ceiling. I look like an icicle.

Stalactites

Stalactites are dripstones that hang down from a ceiling like an icicle. Water drips down a hollow central tube. Minerals are deposited and harden at the end. They form from calcite, gypsum or epsomite.

Carbonic acid in water dissolves rock and forms cave passages. Caves take 30,000 to 60,000 years to form. They cover 10% of the earth and occur in temperate, tropical, alpine and polar biomes. About 1/4th of the world's people depend on water supplied by karst areas. Human encroachment and pollution affect them.

What continent does this fish live on?

What habitat does this fish live in?

What does this fish feed on?

How does this fish reproduce?

Can it live in fresh and salt water?

Atlantic salmon, *Salmo salar*, hatch from eggs in freshwater streams and rivers. Young are called fry. They feed on insects and live in freshwater for about 4 years. They migrate to the Atlantic Ocean and live in saltwater for 4-5 years. Adults feed on fish and grow to over 30 pounds. These fish are anadromous. They return to the same place they were born to spawn. They can live in fresh or salt water. They do not die after spawning like most members of the salmon family.

eastern box turtle

early childhood

The Gila monster is a venomous lizard. It stores fat and water in its tail.
